Mobile Pathways

My app will be a tabbed/navigation photography skill app that will teach the viewer different aspects of photography, their usefulness, and how to achieve said style. More than anything, it's just an education app, but having tips to teach the viewer how to get into the real thing. I'll give descriptions as well as examples of each skill, but overall, it's not an app that has many features (I thought about incorporating a camera access setting, but in terms of coding, that sounds like a lot of work that would drain the next 8 years of my life).
